ROW DEVELOPMENT & COMMERCIALIZATION

SMART CITY INFRASTRUCTURE

FIBER OPTIC NETWORK

BROADBAND EXPANSION

The Atlanta BeltLine is one of the most comprehensive transportation and economic development efforts ever undertaken in the City of Atlanta. It is a sustainable urban revitalization project transforming 22 miles of abandoned railroad corridor into a network of parks, multi-use trails and a light rail transit system circling downtown Atlanta and connecting 45 in-town neighborhoods.

Considered a catalyst for economic growth and renewal, the Atlanta BeltLine is a springboard for connectivity to homes, businesses, roadways, schools, healthcare facilities, light poles, traffic signals, public safety infrastructure and more.

Following a formal Request for Information process, the Atlanta BeltLine, Inc. (ABI) awarded eX² Technology a public-private partnership (P3) contract to design, build, operate, maintain, commercialize and finance a multi-duct fiber optic cable and wireless network infrastructure system.

The network serves to advance ABI's internal communications and other smart city and public safety initiatives, including Wi-Fi, lighting and security technology along the BeltLine as well as small cell capability, data center connectivity and broadband expansion to surrounding businesses and communities.

As ABI's exclusive commercialization partner, eX² is marketing and commercializing its excess duct, fiber and wireless capacity on a vendor-neutral basis. eX² also provided private equity funding in support of the Project.

ABOUT US

eX² Technology, a Vivacity Company, is a single source solution for those seeking to build, scale or future proof their communications infrastructure. eX² specializes in standalone and turnkey network design-build-maintain and infrastructure asset commercialization services to maximize customer revenue potential and accelerate broadband expansion throughout the nation.
