

# Delivering Smarter, More Efficient Intelligent Transportation Systems

A robust intelligent transportation system (ITS) relies upon an advanced communications network and specialized electronic systems to effectively result in safer, smarter travel. To the modern day traveler and professional freight industry, the technology that allows an ITS to operate at its peak performance most likely goes unnoticed. But at eX<sup>2</sup> Technology, we specialize in delivering the technology and infrastructure that serve as the backbone for smarter, more proficient ITS solutions.

## Faster, Safer and More Efficient Travel

Today's ITS networks provide the traveling public with enhanced security and more effective means of reaching a destination than ever before. Utilizing high-speed voice, data and video communication technology, ITS networks enhance interoperability and allow instant communication between local authorities, first responders, toll bridge and highway staff as well as maintenance and construction crews so critical situations can be addressed immediately. The most technically advanced ITS networks can help improve a traveler's experience by alleviating roadway congestion, addressing truck parking concerns and providing the public with reliable, real-time information for smarter, more informed transportation decisions.

## The eX<sup>2</sup> Difference

For more than 20 years, our team of ITS experts has been assisting public transit agencies to relieve and manage traffic congestion, improve highway safety and reduce emissions for the nation's busiest corridors.

eX<sup>2</sup> Technology specializes in financing, designing, installing and maintaining robust broadband and critical infrastructure networks that support the most advanced ITS solutions. Our public-private partnership (P3) offering allows us to serve as a single source solutions provider who will help identify new revenue streams through right of way and indefeasible right of use development efforts, propose creative funding plans and offer other alternatives to help offset network costs. From the communications backbone to electronic toll collection, video surveillance, license plate recognition and variable dynamic messaging signs to network control and operation, we are the private partner who will bring the right team, partners and third parties together to deliver a world-class ITS solution for safer, smarter, more connected roadways.

Find out how eX<sup>2</sup> can help you improve and streamline your ITS network. Contact us today.

### Our Promise

We are the **Private Partner** in the P3 relationship. With our true public-private partnership, we provide creative financing options and deliver turnkey networks and services. To us, a public-private partnership is more than a concept, it's a promise.

### Our Results

ECONOMIC DEVELOPMENT

IMPROVED PUBLIC SAFETY

ADVANCED HEALTHCARE

ENRICHED EDUCATION

PROGRESSIVE COMMUNITIES

STREAMLINED TRANSPORTATION

### About eX² Technology

eX² Technology was founded by a passionate team of seasoned communications professionals with uncommon ambition. We strive to provide swift and secure broadband and intelligent infrastructure networks to a variety of industries with greater efficiency, less cost and a streamlined acquisition process. We believe that, by providing superior products and services to our customers, we help them grow economically; improve public safety and interoperability; and continue to advance healthcare and educational communications.
